

LANDSCAPE

The landscape proposal

The landscape design is tailored to the site opportunities and constraints. Existing trees and hedgerows combine with new hard and soft landscaping to create a safe and welcoming environment. Key features include:

- Creative planting forms “active” and “quiet” zones
- Kitchen garden encourages healthy eating and exercise
- Sustainable drainage “rain garden” will enhance biodiversity
- Shared space: parking has flush kerbs, different paving for vehicles
- Combined bin and bike store with screen planting
- Planting surrounds lawn areas creating a ‘secret garden’ environment
- Wildflower meadow mounds screen ground floor apartments
- Pergola provides shade and shelter
