

LANDSCAPE

The landscape proposal

The landscape design is tailored to the site opportunities and constraints. Existing trees and hedgerows combine with new hard and soft landscaping to create a safe and welcoming environment. Key features include:

- Retention and enhancement of existing landscaped gardens
- existing hedges augmented with new planting and close board fencing
- green screen to rear of parking bays to soften fence line
- Shared space: parking has flush kerbs, with different paving for vehicles
- Combined bin and bike store
- New close board fence defines plot boundary
- Oakfield Road trees retained, new rooting areas to support long term, healthy growth
- Deeper areas of planting provide visual and physical barrier between communal and private spaces
- Retained trees under-planted with sensory planting
- Seating area with central water feature providing interest and sensory stimulation
- Reinforced grass nature trail through existing trees with benches, a swing and a tree seat.
